Better Programming Initiative

Enabling Timely & Effective Infrastructure Improvement & Winterization Response

Infrastructure Improvement & Winterization: Different Responses, Different Timelines

Timely funding, planning and implementation for infrastructure and winterization reduces suffering and improves aid effectiveness.

Winterization should be included in the regular programming cycle. It should be included in the Humanitarian Response Plan (HRP).

Timely funding and planning are crucial for effective response. The timeline for infrastructure improvement starts between April and October (dry season).

Implementation of integrated activities (tents leveling, road rehabilitation, rain drainage, culverts and solar lighting) start between April and October (dry season).

All responses while the sites are flooded are emergency responses. Infrastructure improvement can only occur in the dry season.
