

Figure 1- Subnational Cluster Luhanske field notes

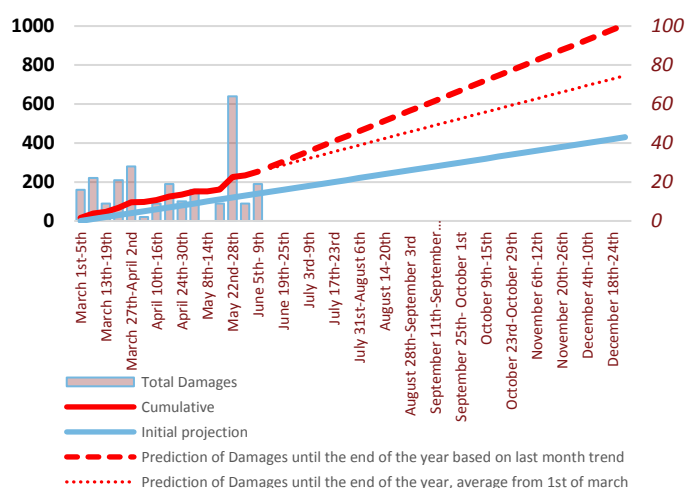

Housing, Land, and Property Country Case Studies: In May 2017, members of the Housing, Land, and Property Technical Working Group compiled case studies on Armenia, Azerbaijan, Bosnia & Herzegovina, Colombia, Cyprus, Georgia, Moldova and Serbia to learn about what was their experience in post-conflict settings with tenure security and the path towards compensation. Housing context, recovery, restitution, compensation, and cases from the European Court of Human Rights were examined and shared with the Ministry of ToTs and IDPs.

Subnational Field Notes: Luhanske Village This month the Shelter Cluster published [field notes](#) about a recent visit to Luhanske village in Bakhmut Raion in northern Donetsk Oblast. The document summarizes the trends in damages according to areas where secondary damages are the most prevalent while including feedback of the beneficiaries who received shelter assistance.

Collective Centre Monitoring: In May, the Shelter Cluster collaborated with several agencies to complete data collection to check up on the status of Collective Centres. **People in Need**, the **Danish Refugee Council**, **Stabilization Support Services**, and **UNHCR** worked with the Shelter Cluster Team to call, visit, and speak with IDPs and Collective Centre Managers to find out what is the status of Collective Centers across Ukraine. A high number of closures were recorded since last year's update largely related with lack of resources to maintain the operations of the centers. A publication of the monitoring is expected in June 2017.

Escalation of Damaged Homes in May: As noted in the context update, May was another month where there was an escalation of newly damaged homes along the contact line. As the conflict calmed down after the flare up of activities in Avdiivka, the Shelter Cluster has been monitoring the weekly number of damages reported as explained in its [technical guidance note on the escalation of emergency](#). If the conflict continues on its current trajectory, it means that the initial cluster projections for newly damaged homes will be off by an estimated 577 households causing cumulative damages to over 1000 households by December 2017. As noted in the chart below, the cumulative damages has already surpassed the cluster's initial projections and puts strains on humanitarian actors to provide acute emergency and light and medium repairs to newly damaged homes in addition to homes that were damaged in 2016.

Prediction of Damages in 2017, GCA Only

KEY DATES

May 2017 witnessed an escalation of activities with the number of damaged homes rising to 29 homes damaged per week with the largest amount of violence recorded during the week of the 22nd to the 28th of May. This week was the highest number of homes reported damaged since the flare up of the crisis in February 2017.

Activation of Cluster: December 2014
