

Information and Communications Needs Assessment

This material has been funded by UK Aid from the UK Government; however, the views expressed do not necessarily reflect the UK government's official policies

The Information and Communication Needs Assessment was carried out through the Communicating with Communities Working Group. Using an inter-agency approach, the following organizations contributed to the assessment. In particular, the following agencies agreed to a joint questionnaire, supported enumerator trainings and conducted the assessment across 10 affected districts and VDCs they have been working in.

Any comments and feedback related to this report may be forwarded to Giovanni Congi at giovanni.congi@one.un.org, Bronwyn Russel at bronwyn.russel@one.un.org, Bipin Jha at bipin.jha@one.un.org and Ankit Khanal at ankit-p.khanal@one.un.org

Overview

From the period of July and August 2015, the Inter Agency Common Feedback Project (CFP), working under the Communicating with Communities Working Group, coordinated an information and communication needs assessment. As a result, a total of 222 key informant surveys across 10 earthquake affected districts were completed. These key informants represent a variety of social groups.

With limited resources and capacity, it was agreed that key informant surveys would provide the best opportunity to capture a wide range of views from communities. The key informant surveys were carried out in VDCs that participating organizations had presence in. The completed surveys and resulting assessment cannot claim to be representative of earthquake affected communities but it can offer some insight on key information and communication needs of communities.

Key findings from this assessment include:

- A total 69 percent of respondents had been displaced from their homes and were staying in a temporary shelter or designated camps. This may have an impact on how information is received
- While local language remains critical for effective communications, more than 80 percent of respondents do regularly communicate in Nepali
- An overwhelming majority of respondents use and prefer to use radio and television to receive information. Mobile phones is also an identified key source of information. While these sources are important for respondents, access remains a challenge with respondents citing lack of electricity as the main barrier to information. Despite this, a majority (94 percent) of respondents do have regular access to radio with fewer (72 percent) able to regularly access television
- Mobile phones are primarily used to send and receive calls. In addition, nearly 50 percent of respondents also use mobile phones to listen to radio or receive information/alerts
- While internet access is limited, those who do access internet primarily do so through mobile phones (60 percent)
- A majority of respondents (87 percent) can recall receiving information related to earthquakes. However, action taken on information received is unclear and requires additional investigation.

- 13% of people said that community meetings and community leaders was the second main way people communicate with aid providers
- Only 6% of the people surveyed use Facebook and email to communicate with aid providers
- In Rasuwa 32% people use SMS message as their second main way to communicate with aid providers

28. Third main way people communicate with aid providers?

- 24% of the people say their third mode of communication with aid providers is through community meetings and 21% of people say through community leaders
- 19% people use face to face conversations as their third method of communication with aid providers
- Only 13% of people use internet in the form of Facebook or email as third main way to communicate with aid providers

29. Has any NGO worker visited your community/shelter and provided information on the disaster and how to get back to normal or do you know of anyone who has attended any community consultations?

- 55% of people responded positively to the question asked
- 45% gave negative feedback to the question asked
- Those who had not been to a community consultation were greater than those who had been in the following districts:
 - Sindhupalchowk
 - Ramechhap
 - Gorkha
 - Kathmandu

30. If yes, first issue shared?

- The majority of respondents who had been to a community consultation had issue with General news on “What's happening here”. The percentage of respondents saying this was 44%
- Another 18% people had issue on what to do during aftershock or earthquake
- Only 3% of people shared issue on how to get water as their first issue
- General news on what's happening here was not the first issue shared in Ramechhap, Gorkha, Nuwakot or Sindhuli. In these districts primary issues included the security situation here and what to do during aftershock or earthquake

31. If yes, second issue shared?

- 15% of people shared second main issue as "Security situation here"
- 12% of people had issue with what to do during an aftershock or earthquake
- 3% of people still shared they had issue with finding missing people
- But, security situation here was not the second main issue shared in Dolakha, Dhading, Ramechhap, Sindhuli & Kathmandu

32. If yes, third main issue shared?

- Of those surveyed, 10% of people shared the third main issue was on “What to do during aftershock or earthquake”
- 6% of people each had problem with “relocation, security situation here and on how to get shelter/ accommodation or shelter materials”
- 5% of people each had other problems such as how to communicate with aid agencies, how to get access to education and how to get food
- The following districts had third main issue other than what to do during aftershock or earthquake
 - Dhading
 - Lamjung
 - Nuwakot
 - Sindhuli
 - Kathmandu

33. Can you recall the topics of public awareness messages on the radio related to the earthquake situation?

*(multiple choice question)

- 87% of people remembered the topics of public awareness messaged on radio related to earthquake. Most common topics they remembered was related to shelter, food, nutrition, sanitation, clean water, healthcare and mental health among which most remembered topics was related to shelter, clean water, food and sanitation
- Amongst the people surveyed, 8% of people remembered topics other than mentioned in the survey form
- 5% people did not remember any topics
