HIGHLIGHTS

- The Cluster held 3 General meetings, 4 TWIG meetings and over 20 Ad hoc meetings to facilitate coordination, strategy development, information sharing, emergency response and technical support over Q3.
- A technical support mission in Aden Governorate strengthened coordination and empowered the Aden Sub national Cluster coordination while fostering closer engagement with local authorities.

Site Management Response

The first phase of the IDP Hosting Site (CCCM) Baseline assessment carried out in collaboration with REACH initiatives was published. The assessment will enable Cluster Partners elicit the multi-sectoral needs in IDP Hosting Sites and mobilize support to meet them through Site Management support systems.

A presentation was made to the HCT - Donor (Video linked) meeting to update the humanitarian community on the project objectives, scope and timelines and to encourage donor support for the response required.

The Cluster was represented at the Global CCCM retreat in Geneva to engage with and exchange ideas with Cluster coordinators and camp managers from all over the world. The Cluster highlighted its activities undertaken and challenges and opportunities encountered.

In order to facilitate Site Management activities of our Partners a Site Management gap assessment was developed and used by one of our Partners as the preliminary step in developing a Site Management response.

Given the fact that most of the Sub national Cluster coordinators are new to the Cluster and coordination and at their request for capacity building a comprehensive training package including documents and online training resources was put together and shared for self-capacity building.
